They're best at smaller sizes, and make a great alternative to Monaco if you're on a non-Mac platform and want really tiny fonts and the eyestrain that goes along with them.

Profont is a Monaco-like bitmap font available for Mac, Windows, and Linux (there's also a modified version for Mac OS X called ProFontX by a different author).. This is a step-by-step tutorial on how to download fonts, installing them, and using them in your Microsoft Words, Powerpoint, Excel and more.
